

Pesticide Pete In 3D

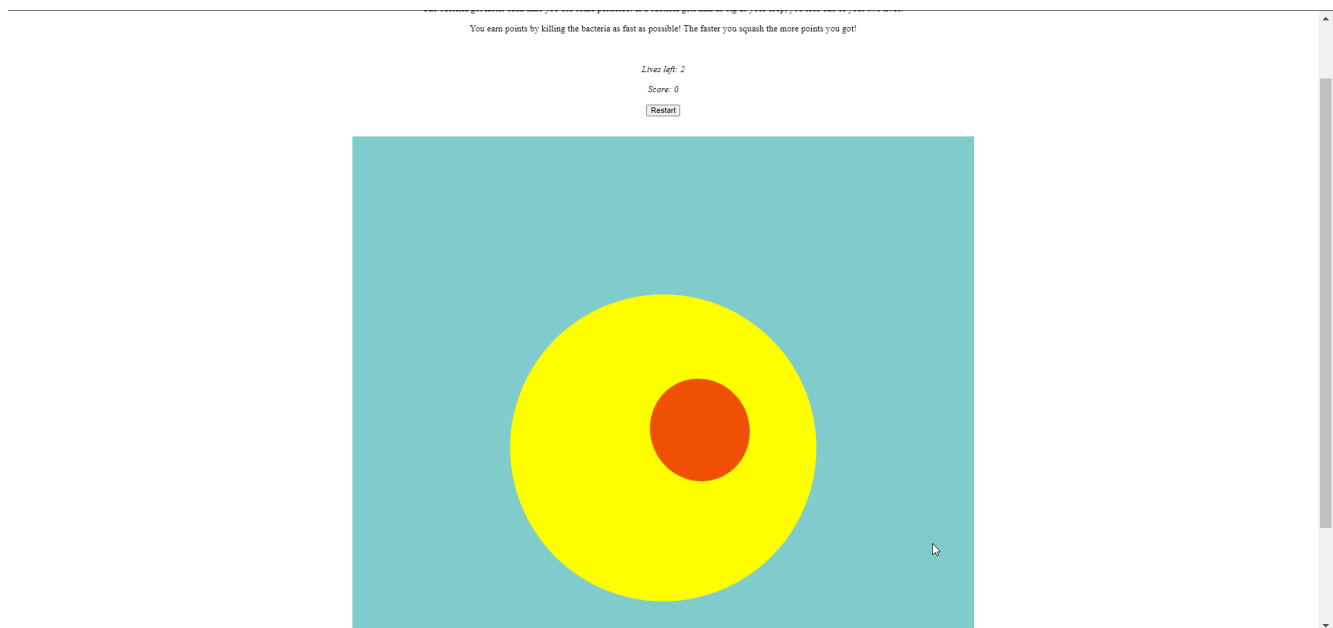

Picture Gallery

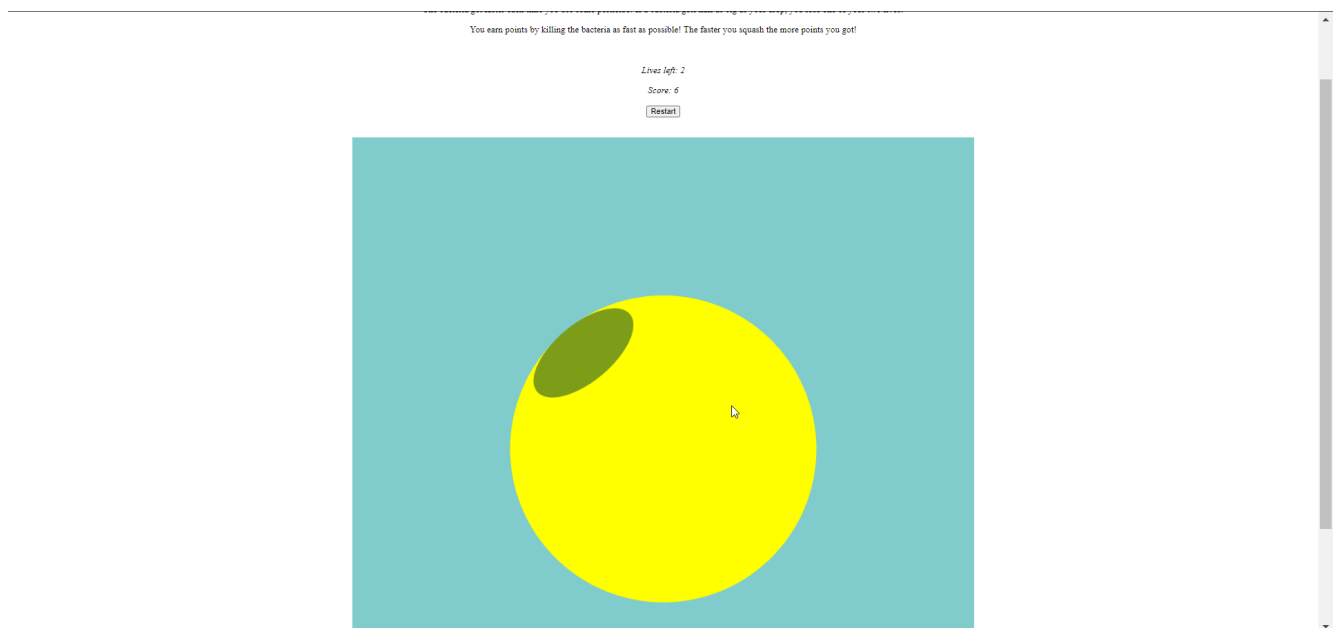

The game begins with the instructions which are very simple to follow. We can see a counter for our two lives, a score counter, and a restart button to restart the game. Scrolling down we can see the game screen.

Here is the game screen. We can see our big planet of wheat floating in the sky, and it is this planet of wheat that you, Pesticide Pete, are tasked with protecting! You can drag your mouse around the globe to see the other sides of it!

Oh no! A colony of bacteria has crash landed onto the planet and is starting to mutate and grow! You must click on the colony with your pesticides to wipe it out!

Great job! Uh-oh, hold on just a minute! Another bacteria colony has landed on our crop planet! Destroy it for points! The faster you do so, the more points you get.

127.0.0.1:5500 says

You let the bacteria eat half the cornfield! Defend the other half!

OK

Oh no!!!! A bacteria colony took over half of the crops! This half of the crops is now dead and you must work extra hard to defend the other half!

127.0.0.1:5500 says

You let the bacteria eat all the corn, now the farmer will go hungry! You Lose!!!

OK

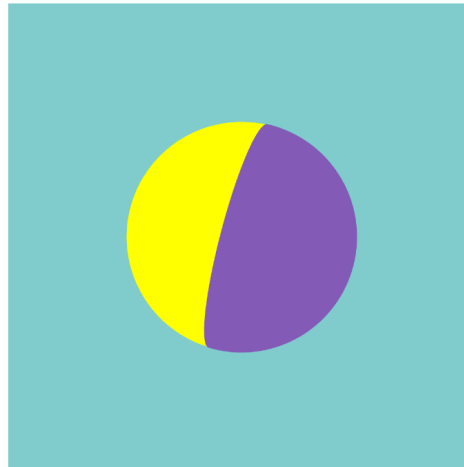

Pesticide Pete In 3D

Instructions: Use your pesticide on the bugs by left clicking them before they too big and eat your corn plants!
The bacteria get faster each time you use some pesticide! If a bacteria gets half as big as your crop, you lose one of your two bins!
You earn points by killing the bacteria as fast as possible! The faster you squash the more points you get!

Lives: 0 You Lose!

Score: 20

[Restart](#)

Oh nooooooooooooo! The bacteria ate the other half of the corn and now the farmer will be hungry for the winter :(he's going to have to make a lot of visits to Planet McDonalds now!

Luckily for you (and the farmer) this is just a game so you can click the restart button and play all over again... and again... and again!
